

## love Straight Teeth

If you're dreaming of straighter teeth then we have a range of options available. Our dentists will look at your specific needs and recommend a teeth straightening process we think is best for you.

### Cosmetic Fixed Braces

We use our system called Love Straight Teeth Fixed. This system incorporates a range of state of the art products and can include using your natural tooth colour to create brackets that are simply glued to your teeth. The same natural coloured wires and elastic bands blend in to complete the system. This system dramatically reduces the time it takes to straighten your smile. Most cases completed in under 6 months.

### Clear Aligners

We use our system called Love Straight Teeth Clear. Clear Aligners are an almost invisible brace made from an acrylic tray moulded specifically to gradually move your teeth into the desired position. They are worn all day and can even be worn whilst drinking - you only need to take them out whilst you eat. As the aligners are clear, most people won't even notice you have braces on. Time taken varies and in most cases can be completed in 6-9 months.

### White Fillings

Cavities or gaps in your teeth can be filled with a strong type of plastic we call composite. These fillings replicate your natural tooth colour and are a better looking alternative to silver or gold fillings. One visit only to complete the treatment.

Why our clients  
*love* coming to us...

"Thank you so much for making me smile! You've been amazing and really helped me through a difficult time. You went the extra mile and you didn't have to."

# We want you to *love* going to the dentist

## Crowns

Crowns are covers for your teeth. They improve the strength and appearance of the tooth. Each crown is created in the laboratory over 1 week.

Two appointments are required to complete the treatment. Modern Crowns look very realistic, just like a real tooth and are a great alternative to an original cracked tooth or unsightly older crowns

## Veneers

Veneers are either porcelain or composite covers used to change the colour or alter the shape of your teeth to give you the best possible smile. Mostly veneers can be bonded directly to your teeth. In some instances your tooth surface may need to be abraded to provide a more effective bond. Composite veneers can be made directly whilst you are in the chair. Porcelain veneers require approximately 1 week, impressions are taken and sent to the laboratory. We provide you with a temporary veneer in this case.
